

## How to Fix Buffering During Vimeo Playback

- 1) Bring up the Vimeo playback bar (see below) by placing your mouse anywhere in the Vimeo streaming screen

- 2) Click on the “gear” icon (see below)

- 3) This will bring up the Vimeo streaming **Quality** menu. Select either “Auto” or a lower resolution (see below)

Also, please note that using Wi-Fi and watching the streams full screen might also contribute to buffering. Please consider using a wired connection and/or watching the stream in a browser window

For other tips, please see this article - <https://vimeo.zendesk.com/hc/en-us/articles/115015759328-Troubleshoot-video-playback-issues->
